

PEDONE SICURO

Intelligent
crossings

**An international patent from
an idea entirely made in Italy.**

PEDONE SICURO

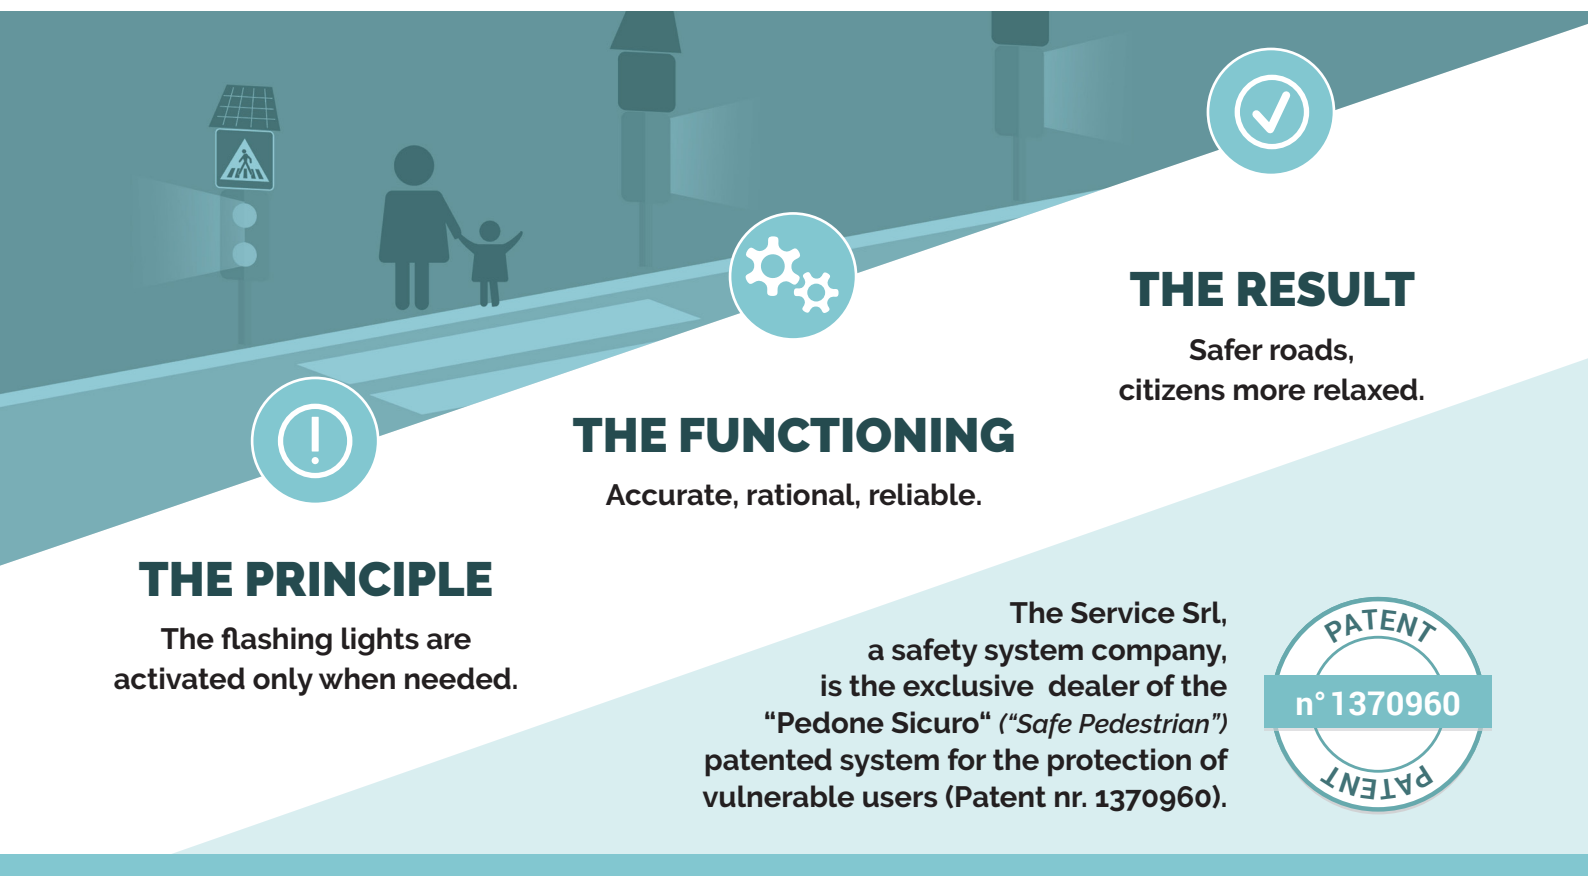

One system, many safe lives.

WHAT IT IS

PEDONE SICURO is a signaling system for pedestrian crossings (not yet controlled by a traffic light plant) made up of photocells that detect the presence of pedestrians on the sidewalk just before the crossing.

HOW IT WORKS

The flashing lights installed on poles close to pedestrian stripes at a distance of about 40 m are activated, in order to alert coming drivers of the presence of pedestrians. In case of no pedestrians, the device remains inactive.

THE RESULT

Safer roads,
citizens more relaxed.

THE FUNCTIONING

Accurate, rational, reliable.

THE PRINCIPLE

The flashing lights are
activated only when needed.

The Service Srl,
a safety system company,
is the exclusive dealer of the
"Pedone Sicuro" ("Safe Pedestrian")
patented system for the protection of
vulnerable users (Patent nr. 1370960).

An idea of great social utility in full compliance with all EEC road safety regulations.
The system consists of:

2 LIGHT SIGNALS

To place as
pre-signal at about
40 m from the
pedestrian crossing

4 LIGHT SIGNALS

Placed on all
perimeter sides of the
pedestrian crossing

PHOTOCELLS FOR DETECTION OF PEDESTRIANS

That mark the
perimeter of the
pedestrian crossing

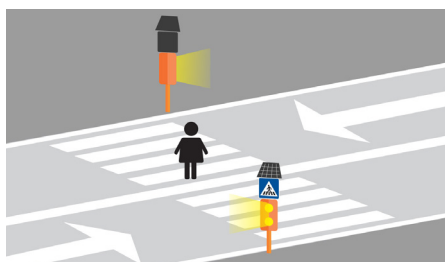

AN ELECTRONIC SYSTEM

A management system
called "Jordi" that,
once a pedestrian is
detected, activates
the led lamps.

SOLUTIONS

1 BASIC SOLUTION

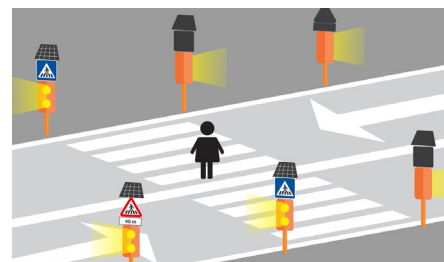

Nr. 02 orange galvanized steel poles (art.21 Highway Code / art.30 implementation regulation) to be positioned near crossings, for each direction of travel.

2 IDEAL SOLUTION

Nr. 02 orange galvanized steel poles (art.21 Highway Code / art.30 implementation regulation) to be positioned near crossings, for each direction of travel. **Nr. 02 orange galvanized steel poles** (art.21 Highway Code / art.30 implementation regulation) to be positioned about 40 mt. from the crossing, one for each direction of travel.

3 COMPLETE SOLUTION

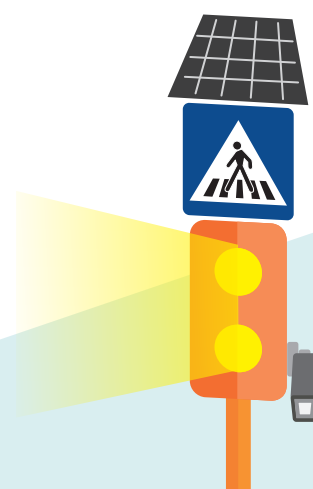

Nr. 04 orange galvanized steel poles (art.21 Highway Code / art.30 Reg. implementation regulation) to be positioned near crossings, two for each direction of travel. **Nr. 02 orange galvanized steel poles** (art.21 Highway Code / art.30 implementation regulation) to be positioned about 40 mt. from the crossing, one for each direction of travel.

PEDONE SICURO

Making pedestrian crossings safer
communicates reliability and
efficiency.
